

HACK DAYS

CampusFix AI

A multimodal AI agent that turns real campus problems into resolved service requests.

See it. Report it. Fixed.

THE PROBLEM

Broken things are everywhere on campus.

Leaking fountains. Dead printers. Locked doors. No Wi-Fi. Students spot the problem instantly — they just don't know what it's called, who owns it, or how to report it.

Plumbing

Electrical

Furniture

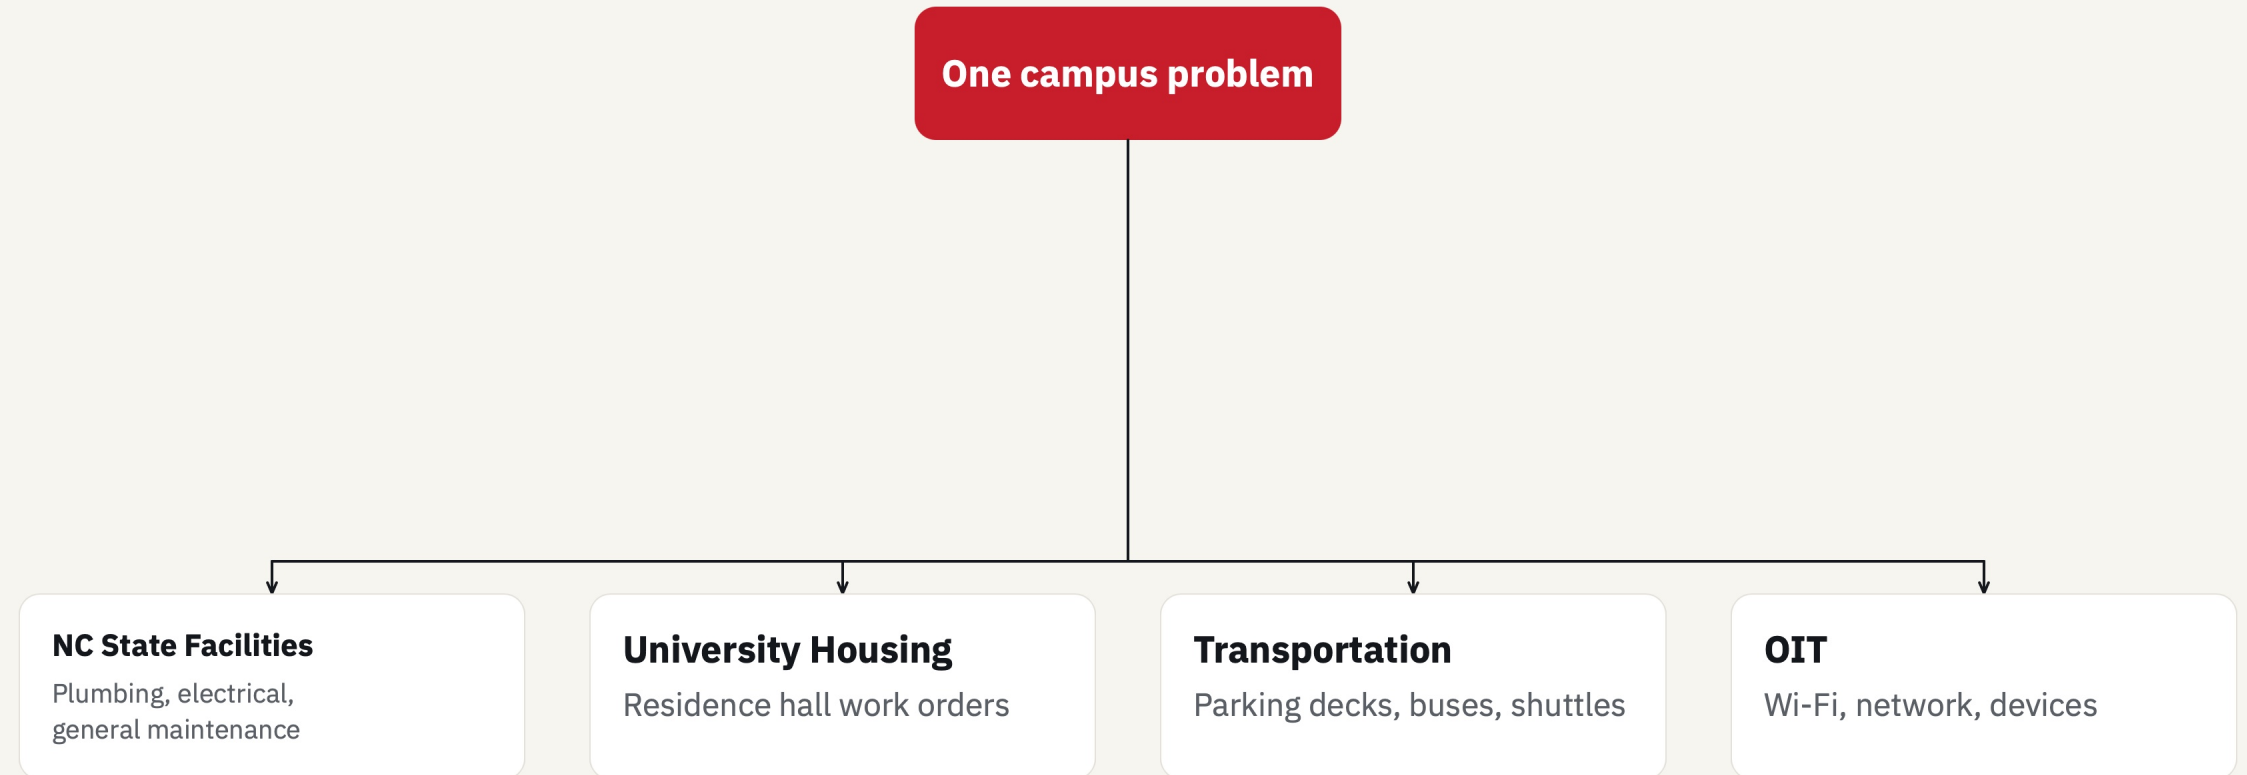

Wi-Fi / IT

Access & safety

WHY IT'S HARD

Campus isn't one system

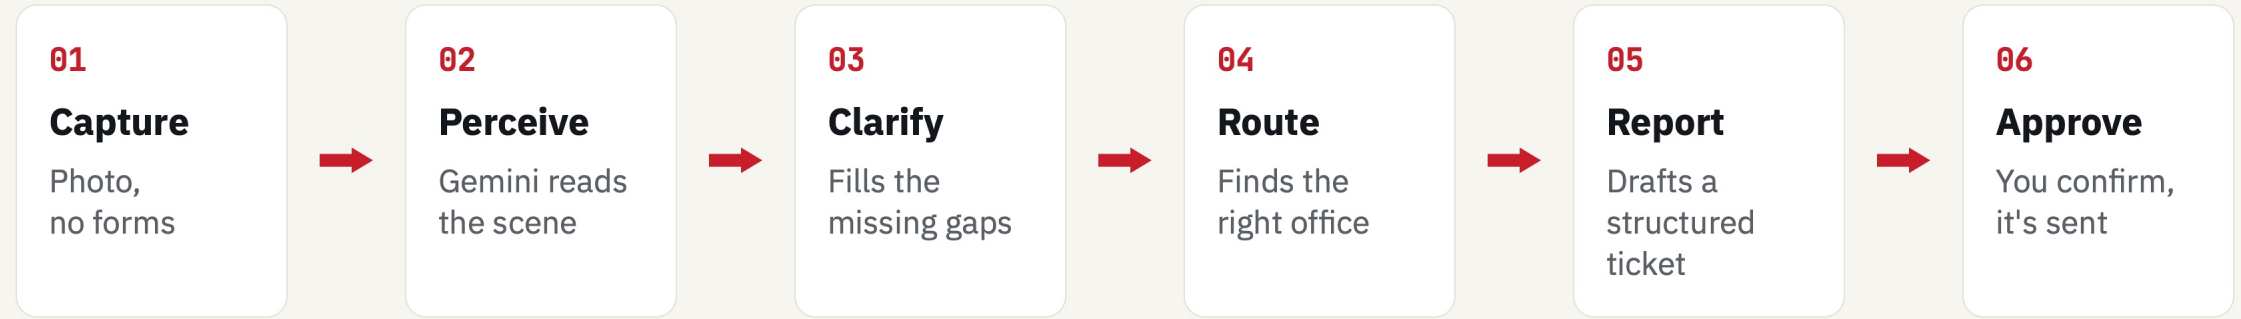

THE IDEA

**Don't fill out a form. Just show it
to Gemini.**

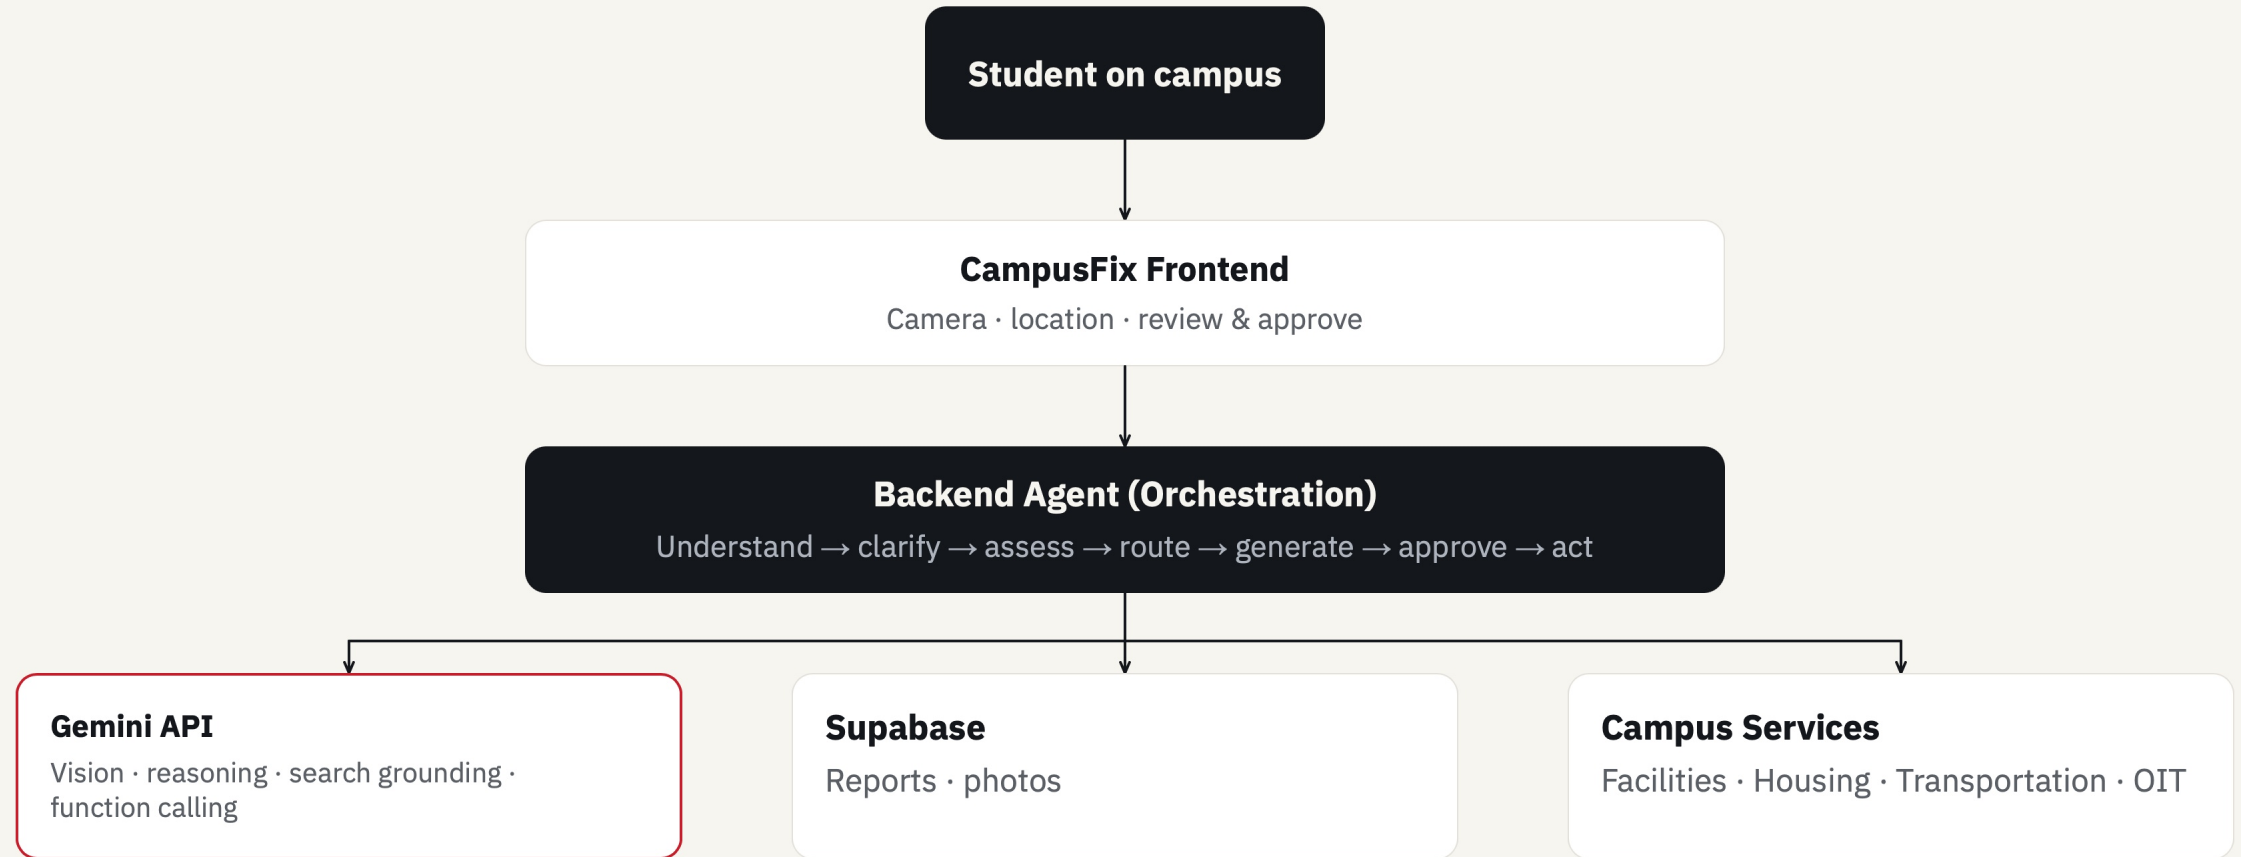

CampusFix perceives the problem, reasons about it, and routes it to the right campus office — with a person approving every step.

HOW IT WORKS

One flow, from photo to fixed.

Gemini sits in the middle of the pipeline, not at one end.

THE OTHER SIDE

Facilities sees it the moment it's filed.

ACTIVE INCIDENTS

● URGENT	CF-1024	Plumbing leak — Engineering Bldg II	Just now
● MEDIUM	CF-1023	Broken chair — Hunt Library	14 min ago
● LOW	CF-1022	Light out — Talley Student Union	32 min ago

More signal, less duplicate work.

Duplicate detection

Gemini compares a new report against open incidents nearby. Ten reports of the same broken elevator become one incident with ten confirmations — not ten tickets.

Crowdsourced urgency

Priority isn't AI severity alone. It factors in confirmations, time open, and safety signals — so real emergencies rise to the top automatically.

TECH STACK

A four-piece stack you can actually finish in six hours.

Frontend

Next.js, React — camera,
mic & location capture

Backend

Next.js API routes — runs
the agent loop

AI

Gemini 3.5 Flash

Data

Supabase — records, photos

CAMPUSFIX AI

AI that connects campus users with campus operations.

See it. Report it. Fixed.
